

Learning Strategies Portfolio: Study Strategies Template

Name: Amna Ahmad

Complete the **Table 1** identifying:

- the strategies from the module you are using
- the course, or courses, the strategies should help

Table 1 Strategies

Strategy	Strategy Name	Course(s)
1.	Spacing Effect	Chemistry (CHM-151)
2.	Study Buddy	Chemistry (CHM-151)

Complete **Table 2** identifying pros and cons of each strategy. Identify at least one pro and one con for each strategy.

Table 2 Pros and Cons

Strategy	Strategy Pro(s)	Strategy Con(s)
1.	Allows for more time to understand and retain information, as well as prevents cramming	Requires constant planning and daily discipline, and I have to find time for it everyday
2.	Provides accountability as well as gives you a partner to work problems with	It can get distracting

Reflection

Overall, do you feel the strategies you picked were effective for this learning situation? Why or why not? Would these strategies be effective for other learning situations? Why or why not? (150 minimum word count)

I feel like the strategies I used, which were the spacing effect and having a study buddy were effective for studying for my Chemistry (CHM-151) final. As a college student, I've learned the hard way that cramming the night before just doesn't cut it anymore, especially for science classes like chemistry. Using the spacing effect helped me review the material in smaller chunks over a few weeks, which made it way easier to remember complex concepts like molecular structures, acid-base reactions, and stoichiometry. I felt more confident going into the exam because I had actually retained the information instead of just memorizing it short-term. Having

a study buddy also made a big difference. Being able to talk through confusing topics with someone else helped me think through the material in a deeper way. That said, this strategy only worked because my study partner was just as motivated as I was. I think both of these strategies would be effective in other tough courses like biology or calculus because they encourage consistent effort and active learning.

Don't forget to attach your evidence of your strategy use!
